

1.First: Backend

Open **Receipt.WebApi** file

And run the program using **visual studio** to fetch the data from back end and display it in the front

hint: if any confusion happened in the backend rebuild the app and re debugging

2.Second: frontend

Open **receipt.ui** file

And run the program using **VS code** in the terminal write this commands

1- **“npm install”**

2- **“npm start”**
